

Week 4 Report

Dataset Used

The regression task (House Prices dataset) was skipped due to Kaggle login issues. This notebook focuses on the classification task using the Titanic dataset.

- Titanic dataset (classification)

Steps Taken

- Data loading and preprocessing
- Train/test split
- Logistic Regression model training
- Predictions
- Evaluation

Model Performance

- Logistic Regression (Titanic): Accuracy is 80%.

Challenges

- I was not able to do work in house prices because of kaggle login issues. The regression task (House Prices dataset) was skipped due to Kaggle login issues. This notebook focuses on the classification task using the Titanic dataset

Key Insights

- Gender and passenger class are strong predictors of survival.
- Logistic Regression achieves reasonable accuracy.
